3. INSTALLATION PROCEDURE

3.1. TR-13 / TR-15

1. DRAW & CUT

Draw the area used by the inspection panel once it is installed, you can use a template or use the inspection panel itself. Once the area is drawn proceed to cut the panel.

2. REMOVE THE DOOR

Remove the door of the inspection panel, push the door. After the door is opened push down the safety flange in order to disassemble the door.

3. ENTER THE FRAME

Enter the aluminum frame in the hollow cut in step 1. Tilt the frame to take advantage of the longest length between vertexes.

4. HOLD & MARK

With the aluminum frame inside the panel, fix it to the drywall using clamps. Mark the screwing points. (see step 5)

5. FIX THE FRAME

Fix the frame to the drywall with self-drilling screws, use screws suitable for this material. Fix them in the points marked in step 4. These distances A & B should be always ≤ 150 mm.

6. SEAL & PAINT

Seal the screw heads once the frame has been fixed. Seal the screws of the door and paint the door's panel. Do it always with the door disassembled.

7. PLACE

Enter the door inside the hollow left by the frame.

8. CLOSE

After put it in position push the flange to its starting position and push the door to close the inspection panel.

3.2 TR-BL

1. DRAW & CUT

Draw the area used by the inspection panel once it is installed, you can use a template or use the inspection panel itself. Once the area is drawn proceed to cut the panel.

2. HOLD THE DOOR

Hold the door in the hollow cut in step 1. When the inspection panel is in position, bend the flanges. Make sure that the drywall is between the frame and the flanges. Mark the points of drilling.

3. FIX THE FRAME

Fix the frame to the drywall with self-drilling screws, use screws suitable for this material. Fix them in the points marked.

4. SEAL & CLOSE

Seal the screw heads used to fix the frame and paint it. Push the door to close it completely.
